JOURNAL OF CRYSTAL GROWTH

www.elsevier.nl/locate/jcrysgro

# Subject index

Bulk growth
– by solid state synthesis
– – of Bi(Pb)2212 69
– isobaric equation of state
– – of mercury cadmium telluride 282
Computer simulation
– of magnetic force convection attenuation 408
– of plasticity 317
– of solidification 224
– of vacancy agglomeration 462
Convection 243, 395, 475

Dendritic growth
– of ethylene oxide hydrate 376
– of iron cobalt alloys 413
Device characterization
– electroluminescent devices 97
– electronic materials 434
– heterojunctions 24
– lasers 333
– quantum dots and wires 19
– quantum wells 429
Diffusional control
– of cadmium telluride 441
– of zinc selenide 441
Dissolution
– of sodium sulphate in porous media 168

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Etching
– chemical 128, 333, 341
Eutectic growth
– of ethylene oxide hydrate crystals 376

Heterojunctions, see Device characterization
Hydrodynamics, see Convection

Kinetics
– of deformation 317
– of growth 24, 168, 224, 348, 369, 376, 462, 487, 525, 542, 553
– of interface control 24, 137
– of nucleation 183, 191, 325, 369, 462, 539, 542, 553
– of phase transformation 183
– of surface tension 163

Lasers, see Device characterization
Lasers, crystals for
– calcium niobium gallium garnet 145
– electro-optic modulators 333
– frequency conversion 512
– lithium tetraborate 150
– yttrium aluminum garnet 155
Lysozyme 191, 542, 553

Melt growth technique
– by Bridgman-Stockbarger method
– – of lead tungstate 505
– – of silver gallium selenide 201
– by Czochralski method
– – of calcium lanthanum phosphate 302
– – of langanite 128
– – of langasite 128
– – of langataite 128
– – of lithium tetraborate 150
– – of nickel aluminum alloys 108
– by micropulling down method
– – of calcium niobium gallium garnet 145
– – of yttrium aluminum garnet 155
– by self-crystallization
– – of sapphire fibers 499
– by shaped method
– – of sapphire 317
– by top-seeded melt growth
– – of magnesium-doped potassium lithium niobate 405
– – of YBCO 78
– theory of
– – asymptotic scaling 382
– – interface behavior 213
Microgravity, growth under
– of agglomerates 238
– of gallium-doped germanium 475
– theory of oscillatory magnetic convection 395
Morphological stability
– of ethylene oxide hydrates 376

PII: S0022-0248(99)00311-5

Nucleation
- of calcite 369
- of clusters 85
- of inversion domains 419
- of lithium fluoride 487
- of lysozyme 191
- of oxide particles 462
- of protein 553
- of silicon clusters during chemical vapor deposition 52
- of YBCO on neodymium gallate 62
- of zeolite 539
Numbers
- Grashof 475
- Marangoni 243, 395
- Peclet 475
- Prandtl 382
- Rayleigh 382, 475

Phase diagrams, of
- lead calcium sulphur selenide 115
Precursor, for
- arsenic 1
- III-nitrides 247
Purification of
- zinc selenide 434

Quantum dots and wires, see Device characterization
Quantum wells, see Device characterization

Solution growth
- by flux method
- - of copper metagermanite 311
- - of potassium carbonate 122
- by gel method
- - of protein and viruses 357
- by hydrothermal growth
- - of zeolite 539
- by low temperature method
- - of calcite 183
- - of clathrate hydrate films 348
- - of L-arginine hydrobromide monohydrate 341
- - of L-arginine phosphate family 333
- - of L-histidine tetrafluoroborate 179
- - of potassium dihydrogen phosphate 512
- - of 2-amino-5-nitropyridinium dihydrogen phosphate 325
- - of vaterite 183
- by slow evaporation
- - of cadmium iodide 233
Superconductivity materials, high $T_c$
- bulk
- - of Bi(Pb)2212 69
- - of YBCO 78
- film
- - of BSCCO 289
- - of PBCO 293
- - of YBCO 62

Superlattices
- of barium titanate/magnesium oxide/yttrium stabilized zirconia 137
Surface energy determination
- of oxide/silicon 462
Surface structure
- of cadmium iodide crystals 233
- of organic photoconductor film 307
- of semiconductor 1
- of YBCO films 62

Thin film growth, epitaxy
- by laser ablation
- - of barium titanate/magnesium oxide/yttrium stabilized zirconia 137
- by liquid phase epitaxy
- - of silicon 453
- - of YBCO 62
- by molecular beam epitaxy
- - of aluminum gallium antimonide 263
- - of indium aluminum arsenide 24
- - of indium arsenide 24
- - of indium phosphide 275
- - of lithium fluoride 487
- - of mercury cadmium telluride/cadmium zinc telluride 35
- by organic molecular beam deposition
- - of titanyl phthalocyanine 307
- by vapor phase epitaxy
- - through metalorganic chemical vapor deposition
- - - of bismuth antimony telluride 91
- - - of indium gallium arsenide 1, 256
- - - of indium gallium arsenide phosphide 429
- - - of indium phosphide 256
- - - of iron pentacarbonyl 298
- - - of gallium aluminum arsenide 10
- - - of gallium nitride 270, 419
- - - of zinc sulphide 29
- - through pulsed laser deposition
- - - of PBCO 293

Vapor growth technique
- by chemical vapor deposition
- - of carbon 85
- - of silicon 52
- by evaporation and condensation
- - of lead calcium sulphur selenide 115
- - of lead telluride 229
- - of strontium sulphide 97
- - of titanyl phthalocyanine 307
- - of zinc selenide 41
- - theory of misfit dislocations 447
- by radio frequency magnetron co-sputtering
- - of gallium antimonide silicon dioxide composite 19

Whiskers growth
- of BSCCO 289
